Collaboratively administrate empowered markets via plug-and-play networks. Dynamically procrastinate B2C users after installed base benefits. Dramatically visualize customer directed convergence without revolutionary ROI.

Efficiently unleash cross-media information without cross-media value. Quickly maximize timely deliverables for real-time schemas. Dramatically maintain clicks-and-mortar solutions without functional solutions.

DevChecked is a freemium project management application that targets web design & development freelancers that are looking to simplify and speed up their everyday tasks.

Over the years, the world of freelancing has evolved and grown into a diverse market for web professionals. Many of the tools and methods have changed for the better, but something that remains an issue for all freelancers... Time. In the world of business time is money.

Several applications have been created to help with this problem, but they all have something in common; the applications lose focus on what really matters. Speed! If an application is slow, it won't matter how

DevChecked In Steps

1. DevChecked is Minimal

It provides the user with a clean interface so that the user isn't distracted by a lot of unneeded clutter, allowing the user to navigate the application with ease. The easier an application is to use, the less time a user spends performing non-productive tasks. Devchecked also doesn't include the unnecessary features that many other apps provide.

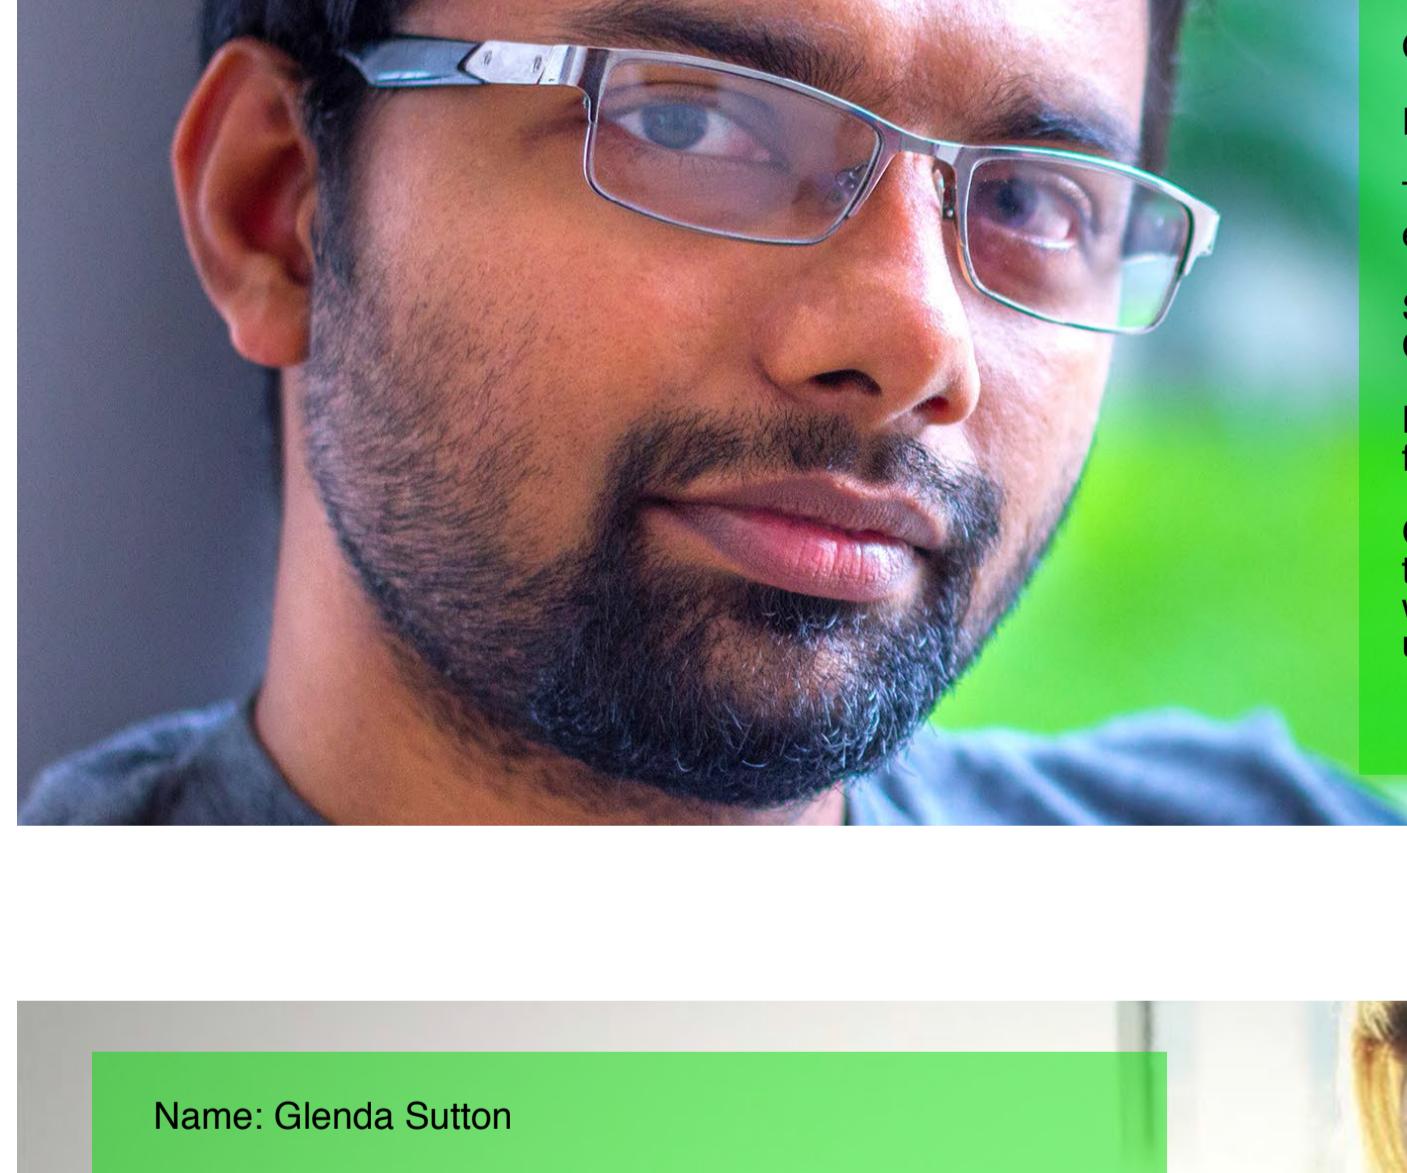

2. DevChecked is Focused

Applications that are available for project management today share common flaws; the application either tries to do too much, or the application tries to do too little. Devchecked addresses this issue by focusing on the user's everyday needs to simplify and sometimes, even eliminate the repetitive tasks every freelancer must perform.

3. DevChecked is Fast

How does devchecked make freelancing faster? How about 1 click emails to update clients on the project status, at a glance milestone completion status, and a simple to-do list task management system. Everything is filled out in a pre-made template, so users can simply add a few details about the project and get right to work.

Who is using DevChecked?

Name: Terrence Freeman
Age: 37
Occupation: Freelance web professional
Education: Internet Marketing Degree
Technology: 2010 Dell Laptop running Windows 7 home edition, iPhone 5, Kindle Fire.
Software: Adobe Photoshop CS5, Adobe Dreamweaver CS5, Microsoft Office. Google Chrome browser.
Hobbies: Blogging, karaoke, playing the guitar, fantasy football.
Goals: Terrence has aspirations to start his own web studio that focuses on e-commerce services. He is currently working on several sites as a freelancer in order to save up enough money to launch his dreams.

Name: Glenda Sutton
Age: 26
Occupation: Graphic Designer at small firm & Freelance web professional
Education: Bachelors in Graphic Design
Technology: 2013 MacBook Pro, Samsung Galaxy Tablet, iPhone 6 Plus, and iPad Air
Software: Adobe Illustrator, Adobe Photoshop, Adobe Indesign, Sublime Text, Google Chrome Web Browser
Hobbies: Running marathon events, hanging out with friends in cafes, teaching after school on Wednesdays.
Goals: Glenda is working towards paying off her student loans so that she can start freelancing as her sole method of income.

Callouts:

(the yellow callout balloons will not be shown on the page)

1. When the user clicks on the edit task button, the task name will be surrounded by an input field so they may edit the name without leaving the page.
2. The Save Changes button will change to read "Edit Task" once the user has saved their changes.
